Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shigehara et al. (US, 5,382,846, "Shigehara" hereinafter) and Watanabe et al. (US 4,730,132, "Watanabe" hereinafter).

Shigehara shows, in Fig. 4, an identical circuit as Fig. 5 of a present invention, and Watanabe shows, in Fig. 16, an identical circuit as Fig. 7 of a present invention except that neither Shigehara nor Watanabe teaches that the first voltage is larger than the second voltage.

Both level shifting circuits of Shigehara and Watanabe shift low voltage level to high voltage level. However, it is well known in the art that when the first voltage is smaller than the second voltage, it will shift high voltage level to low voltage level.

Also, it is well known in the art that the output transistors (such as N1 and N2 of Shigehara or N4A and M4D of Watanabe) can be fabricated with low threshold voltages so that low supply voltage can be supplied to the output transistors in order to provide low output voltages. Therefore, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to have provided the circuit of Shigehara or Watanabe with low supply voltage at the output transistors with modified low threshold voltages in order to shift high voltage input to low voltage output.

Regarding claims 7-9 and 14, it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987).

Regarding claim 15 and 16, it would have been obvious to one having ordinary skill in the art at the time the invention was made to supply 3.3V for the first voltage and less than 0.9V for the first voltage, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).
